

# EmbroideryStudio e3 Lettering - Key Features

## We've got the fonts you need

Choose from over 165 professionally crafted embroidery fonts or convert any True Type font instantly. Adjust individual letters to adapt to customer logos or to improve production.

## Professional tools to fine-tune lettering

Get the look you are after by refining kerning, word spacing and even individual letters. Built-in intelligence remembers your changes for next time.

## Create beautiful monograms and type layouts

Choose from several different type baselines from arc to circle or vertical, or get creative with enveloping. Wilcom's Monogramming tool helps you to quickly and easily combine type styles, decorative motifs and borders to create personalized monograms for your customers.

## Speed up production of personalized team uniforms

Don't mess around with manual handling of team names! This Mail-Merge type feature imports a list of names, auto-fits them to your baseline and outputs for either single or multi-head production.

## Built-in editing for different fabric types

A design created for a towel can now be stitched on silk scarf with Auto Fabric Assistant. This tool automatically applies the most suitable underlay, pull compensation and stitch density settings for your chosen fabric.

## Save time and money with fast, quality stitch results

Optimize your production with full control of underlay, pull compensation, connectors, tie ins/offs, trims, jump and stop machine functions. You can even edit individual stitches to address any problem areas.

## Send designs to your embroidery machine with ease

Stitch Manager, Machine Manager and Connection Manager give you all the options to make sending designs to production a snap! You can also edit machine format values to get the best results.
